KD2 Concept · Shearling | Leather | Nylon

KARL DONOGHUE

Our KD2 concept range, crafted in London combines luxurious shearling and leather with showerproof nylon allowing the wearer flexibility with the changing weather patterns.

Styles with detachable liners

The lightweight showerproof nylon can simply be worn by itself during milder weather. As the seasons change and the weather becomes cooler, add the detachable shearling liner to the nylon outer. The liner can be fastened inside during wet weather protecting your shearling from the rain while keeping you warm. You can choose to wear your liner over the nylon outer if you want to create a statement look. The liner can even be worn by itself as a gilet!

Styles with fixed lining

Many of the nylon & shearing accessories can be reversed. For a cosy showerproof look keep the nylon on the outside with the shearling against the body. For more of a statement, reverse and show the shearling on the outside.

Caring for your Karl Donoghue piece

- Our collections are designed and crafted in London using the highest quality materials and trims to create a luxurious product that should last a lifetime if cared for well. We call this "Luxury for Life".
- We recommend specialist dry cleaning for the nylon pieces because they are trimmed with shearling or leather so you should not wash them at home.
- Small marks on the nylon can be spot cleaned with a damp cloth.
- If you are caught in the rain wearing your nylon product, simply shake off the excess water before allowing to dry naturally (on a coat hanger) away from direct sunlight.
- Our liners are produced using the highest quality shearling. You can download our 'shearling' product knowledge information for more details on to look after your shearling pieces.
- For all products, always refer to the care labels stitch to the item before cleaning.
- Never store your product while wet. When fully dry, your item should be stored in the fabric dust bag provided, not in a plastic bag. This helps protect from UV damage, attack from moths and humidity.

Following these guidelines and the information on the product care label will help you to maintain the natural beauty of your Karl Donoghue piece for many years to come, a far more sustainable approach to fashion.
